REACH POLICY

The European REACH (Registration Evaluation & Authorisation of Chemicals) Regulation (EU Directive 1907/2006/EC) came into force on 1st June 2007 and requires chemical substances manufactured or imported in the EU, in volumes greater than 1 tonne per year, to be pre-registered and registered. The Registration is the responsibility of the EU manufacturer or importer. Importers and manufacturers of chemical substances, mixtures and articles are required to communicate down the supply chain if their products contain any Substances of Very High Concern (SVHC) above 0.1% (w/w).
The UK REACH (Registration Evaluation & Authorisation of Chemicals) was incorporated into UK law on 1st January 2021 following the European Union (Withdrawal) Act 2018. This requires chemical substances manufactured or imported in the UK, in volumes greater than 1 tonne per year, to be pre-registered and registered. The Registration is the responsibility of the UK manufacturer or importer. Importers and manufacturers of chemical substances, mixtures and articles are required to communicate down the supply chain if their products contain any Substances of Very High Concern (SVHC) above 0.1% (w/w).

As a stockist and distributor of composite and structural engineering materials and accessories to Aviation, Space, Defence, Motorsport, and Industrial markets AMI-CON recognises the obligation that we have under REACH and participate in communicating up and down the supply chain so that we can fulfil our obligations under REACH. Furthermore, AMI-CON regularly monitors the Candidate List of SVHC, the Authorisation List (Annex XIV) and the Restrictions List (Annex XVII).

To ensure compliance to UK and EU REACH regulations, we require:

- our manufacturers and suppliers to provide current and up-to-date Safety Data Sheets CLP compliant, Regulatory Safety Data Sheets and/or REACH Compliance statements
- substances in imported products to comply with registration requirements under REACH.
- To advise AMI-CON immediately of any products that contain SVHC in concentrations above 0.1% (weight/weight), so that we can fulfil our obligations to inform our customers and users downstream so that obsolescence can be factored/designed out before the sunset date of the registered material.

As a distributor, AMI-CON depends on its suppliers to ensure that the appropriate compliance action is taken with regards to their products/formulations and actively communicate to AMI-CON the status and details of any affected products. In turn, our internal processes will ensure dissemination, management of the regulatory information downstream and the ability to update our systems accordingly.

This policy will be formally reviewed to meet any changes to legislation, and these will be implemented across the business.

Quality & Compliance Manager Managing Director
